

# MAGNET KIT

## an alternative to suction cup

The new way to fasten a mosquito net or a blind on a hatch / portlight. A small metal plate is mounted on the hatch with 3M doublesided tape. The magnet can easily be mounted to the metal plate. No chance for the magnet falling down. We have made the doublesided tape a little smaller than the metal plate so it can easily be removed without damaging the hatch. Put in a screwdriver under the plate and with a twist the foam tape will break. Use your thumb and roll of the tape recedue and finish with some cleaning liquid that doesn't harm the hatch.
